

# VERTICAL INJECTION PRESS

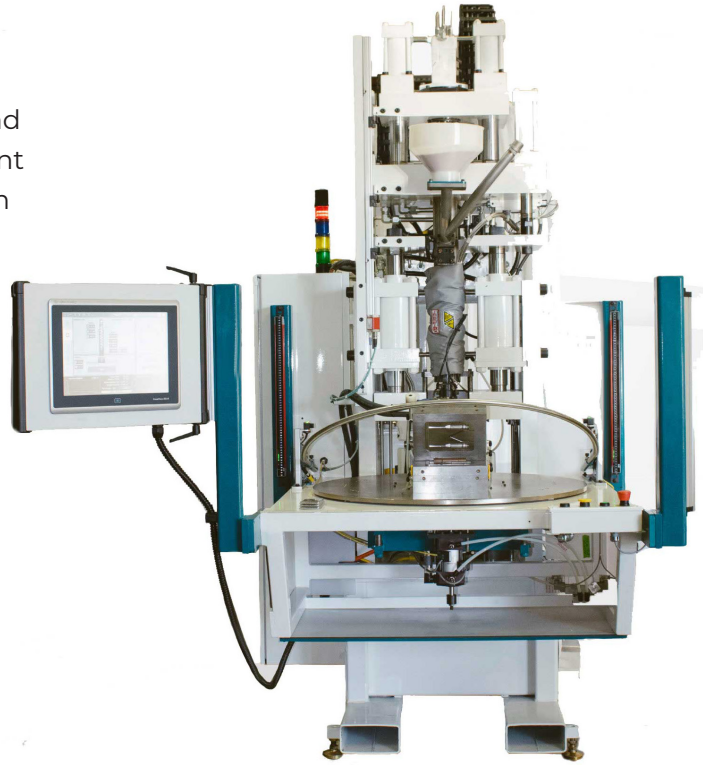

The Vertical Injection Press, also known as VIP, is primarily used with thermoplastic materials in an over-molding/insert molding process. This machine can reduce scrap, provide exact measurements and save time.

This press is available in three configurations:

- Single
- Shuttle
- Indexer

Together with its compact, ergonomic design and production shortening options, the small footprint makes this press suitable for short and long-term production molding.

## FEATURES

### STANDARD

- Closed loop control
- Variable volume displacement pump
- PLC heat control with integrated PID

### OPTIONS AVAILABLE

- Rotary indexing table
- Shuttle left to right
- Standard - for single mold
- Light curtains
- Trinks WarningTrack system
- Data collection
- NRTL Certifications: UL, CUL, CSA, CE Mark
